

# Announcing: Rubber Feet for Molded Grating

---

Fibergrate Composite Structures Inc. is excited to introduce the newest in our line of safety accessories –Rubber Feet for molded grating. With the new rubber feet, Fibergrate can provide their customers a cost-effective solution to elevate grating needed for drainage or waterflow and safe, ergonomic workstation platforms.

The new feet are designed to raise grating 1/2 inch above the ground. With the new feet, grating can also be utilized as “work mats” in applications such as lathes or mills to create a custom-fabricated slip-resistant and cushioned workstation that is lightweight and portable. The open mesh of the grating combined with the raised area created by the feet protects workers by allowing chips and fluids to fall below the standing surface eliminating slip and fall hazards.

The feet are easy to install and should be bonded (using Devcon<sup>®</sup> epoxy, RTV silicone adhesive, super glue, E-6000<sup>™</sup> adhesive) or riveted in place for permanent installations.

Contact your local representative or Fibergrate directly at 800/527-4043 to acquire your new molded grating rubber feet.
